Paris, France
[m] @kay:juke.fr

INFO

Likes to write backend code. Mostly in **JavaScript**, **Node.js** and **Typescript**, sometimes **Deno**.

Also uses modern frontend tooling for personal and client projects. Mostly **React** through frameworks like **Next.js**.

Comfortable with devops, CI and CD on a personal and work level. Uses **Docker** for almost every project. Some experience with **Kubernetes**. **Loves to write CI/CD scripts and actions**.

Understands the value gains of **test driven development**. Comfortable with tools like **Jest** for unit testing and **Playwright** for end to end testing. Some experience with contract testing.

Always keen to learn new technologies, currently on the **Rust** and **Deno** hype train!

SKILL REPARTITION

Backend
~6 years work experience plus personal projects

Frontend
~3 years work experience plus personal projects

Devops
~3 years work experience plus personal projects

WORK EXPERIENCE

Fullstack Developer Jan 2023 - Present, Remote
🔗 Amongus Solutions

Self-employed under single person company and doing freelance work.

Technologies used so far include: **Playwright, JavaScript, Node.js, Express.js, React.js, Next.js**

Backend Developer May 2020 - Nov 2022, Paris, France
🔗 La Javaness

Within a diverse agile team (management, ops, frontend, backend, data) as a Node.js backend developer for the evolution of an internal project "GEDI" orchestrating machine learning bricks for exploration and prospecting of existing datasets in-house from our B2B or B2G customers. Also worked on the creation of internal packages (internationalization api service with i18next integration, gitlab ci contract testing templates, code utilities packaged as private libraries etc) to speed up new project bootstrapping.

Technologies used include: **JavaScript, Node.js, Typescript, Express.js, Jest, PostgreSQL, Elasticsearch, Gitlab CI, Linux, Docker, Contract Testing, AWS**

Fullstack Developer Feb 2019 - May 2020, Remote
🔗 GNR8

Fresh out of a 2-year full time work experience, I wanted to try my hand at creating my own startup. The product was a PaaS that offered account generation for internet marketing agencies. Made with Node.js, Puppeteer and a CI/CD system based on Kubernetes. Had to terminate this venture due to ever-changing legislations on this kind of avant-garde niche markets as well as personal issues about how the technology was being used.

Technologies used include: **JavaScript, Node.js, Express.js, React.js, Docker, Linux, AWS, Jest**

Backend Developer Jun 2017 - Jan 2019, Paris, France
🔗 TravelCar

In charge of conceptualizing, developing and applying a content management system for around a thousand different white/gray labels. Also assigned to experimentation tasks to optimize internal processes. Maintenance and optimization of the existing stack.

Technologies used include: **JavaScript, Node.js, Express.js, Vue.js, MongoDB, Linux, Docker, AWS, Wordpress**
